

Advantages

The Graphic Concrete technique is easy to use

- The membrane is disposable and flexible to use; it can be cut into small sheets or larger pieces can be joined together. There are no limitations to the slab sizes.
- It can be used with very different types of concrete mixes.
- It requires no special equipment. A factory that can make exposed aggregate surfaces can also make Graphic Concrete.
- It requires no special structural adjustments. The exposed areas are only about one millimeter deep, so the image does not affect the thickness of the slab.

The Graphic Concrete membrane is an environmentally friendly product

- The membrane is recyclable and safe to use.
- It does not emit any harmful gas or chemicals.
- It reduces the use of solvent based materials and dust inconvenience during production.
- It does not have any effect in regards to the environmental loading of a building.

The Graphic Concrete surface is finished and assembly-ready directly after production

- It reduces the need for additional material use on the facade (e.g. additional cladding, treatments or paints).
- It also reduces the need for additional scaffolding at the construction site, which minimises any disruptions at the site and saves time during construction.
- The outcome is 100 % made of concrete and the surface is as durable as concrete itself.
- A Graphic Concrete surface is virtually maintenance free, which saves costs during the whole lifespan of the building.
