## Advantages

## The Graphic Concrete technique is easy to use

- The membrane is disposable and flexible to use; it can be cut into small sheets or larger pieces can be joined together. There are no limitations to the slab sizes.
- It can be used with very different types of concrete mixes.
- It requires no special equipment. A factory that can make exposed aggregate surfaces can also make Graphic Concrete.
- It requires no special structural adjustments. The exposed areas are only about one millimeter deep, so the image does not affect the thickness of the slab.

## The Graphic Concrete membrane is an environmentally friendly product

- · The membrane is recyclable and safe to use.
- It does not emit any harmful gas or chemicals.
- It reduces the use of solvent based materials and dust inconvenience during production.
- It does not have any effect in regards to the environmental loading of a building.

## The Graphic Concrete surface is finished and assembly-ready directly after production

- It reduces the need for additional material use on the facade (e.g. additional cladding, treatments or paints).
- It also reduces the need for additional scaffolding at the construction site, which minimises any disruptions at the site and saves time during construction.
- The outcome is 100 % made of concrete and the surface is as durable as concrete itself.
- A Graphic Concrete surface is virtually maintenance free, which saves costs during the whole lifespan of the building.
